DETAILED ACTION

This Office Action is in response to patent application S/N: 10/024,719. Claims 1-4 are now pending.

Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

The drawing filed on 12/21/2001 is acceptable for examination.

Information Disclosure Statement

The information disclosure statement filed 12/21/2001 has been considered.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Jorgensen et al., US patent no. 5,649,064.

As per claim 1, Jorgensen discloses a system and method for modeling flow activities in a dynamic system such as hydrodynamic system with feature limitations very identical to the claimed invention. According to Jorgensen, the simulation method includes steps of determining the neural network so as to adjust to values of a learning base with predetermined tables connecting values obtained for output data from the

output to corresponding values of input data to the inputs and wherein the learning base imposed operating conditions and the determined neural networks are adjusted to the imposed operating conditions (Figs, 4-6, col. 2, lines 49-57, col. 4, lines 7-20, cols. 5-9, for exemplary).

As per claim 2, Jorgensen anticipates hydrodynamic quantities as claimed (col. 5, lines 10-22, for example).

As per claim 3, Jorgensen anticipates flow dynamic and flow quantities which are in thermodynamic application, hydrodynamic applications, etc. for heat flow, fluid flow analysis (col. 5, line 40 to col. 7, line 22, for example) as claimed.

As per claim 4, Jorgensen anticipates learning base modules for training and selecting the physical quantities best suited to the model, variation ranges for the parameters and quantities, and the neural network best suited for the learning base (col. 5, line 47 to col. 9, line 50).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. US patent no. 4,874,963, issued to Alspector, Joshua, on Oct. 1989
